PROFESSIONAL SUMMARY

CS student at the University of Alberta working across AI research and software engineering: mechanistic interpretability of language models and full-stack delivery of production web systems.

WORK EXPERIENCE

Neubahar Labs

September 2026 - Present

Undergraduate Researcher

Edmonton, Canada

- Building an analysis framework for learned representations, used to study feature absorption and feature splitting in sparse autoencoders (SAEs).
- Investigating how one SAE latent can absorb a more general concept, and how a single concept fragments across latents as dictionary size grows, and what that means for the reliability of SAE latents as interpretability units.

AlgoVerse AI Research

May 2025 - Present

Researcher

Remote

- Investigated emergent misalignment in language models (0.5B-32B parameters), demonstrating it occurs reliably across model scales using LoRA fine-tuning and activation steering.
- Built linear probes and early-warning indicators on adapter weights to detect misaligned behavior before it manifests at the output level.
- Co-authored and open-sourced models on HuggingFace; recognized work: MechInterp (Spotlight), CogInterp, UniReps (Honorable Mention).

EW Analytics Consult

November 2025 - Present

Full-Stack Developer

Remote

- Lead a team of 3 delivering full-stack software across GIS portals, management systems, and automation tooling using GeoNode, Google Apps Script, React, and Java.
- Built automation software that eliminated repetitive manual workflows, reducing deployment time by 40%.
- Customized the MapStore (React) UI and built repeatable data pipelines in PostGIS/GeoServer, cutting manual publishing time in half.

PROJECTS

HomeBatch

Marketplace connecting Edmonton home cooks with customers buying single meals, bulk freezer batches, and recurring subscriptions. 15 feature modules across customer, vendor, and admin roles; 8-migration Postgres schema with row-level security; 6 Supabase edge functions for Stripe checkout, payouts, and email. In development, not yet public.

React, TypeScript, Supabase (Postgres/Auth/Storage), Stripe Connect, Vite, Playwright

Study Buddy AI

Educational bot that helps students revise notes, using Retrieval Augmented Generation for information extraction and LangChain for natural language processing.

Python, LangChain, Google AI, NumPy

[Ace Budget AI](#)

AI-powered personal finance platform (hackathon) with receipt scanning, email parsing, and predictive budgeting.

Next.js, TypeScript, Python Flask, TensorFlow, spaCy, Hugging Face, Docker

[HandMouseApp](#)

Real-time hand-gesture mouse control: webcam-based cursor, click, double-click, and drag.

Python, OpenCV, Mediapipe, PyQt5

EDUCATION

University of Alberta *Computer Science, Bachelor's*

September 2023 - May 2027

Edmonton, Canada

SKILLS

Languages: Python, C/C++, JavaScript, TypeScript, HTML5, CSS

ML & Research: LoRA fine-tuning, activation steering, linear probes, sparse autoencoders, RAG, LangChain, TensorFlow, spaCy, Hugging Face, NumPy, Pandas, OpenCV

Web & Backend: React, Next.js, Node.js, Vite, Tailwind CSS, Supabase, PostgreSQL, PostGIS, GeoServer, Flask

Tools & Testing: Git, Docker, GitHub Actions, Jupyter Notebook, Vitest, Playwright
